

# Mid-Facial Tissue Preservation Achieved with Immediate Placement of Co-Axis® Implants and Screw-Retained Restorations

## A Discussion-Oriented Evening Program with Dr. Francesco Amato

### Course Description

Post-extraction socket immediate implant placement in the anterior maxilla remains one of implant dentistry's most challenging procedures. Anatomic challenges often result in implants being placed and angulated in a compromised facial-biased position. This leads to cement-retained restorations or the use of angled abutments, both of which are sub-optimal for preserving mid-facial tissues.

This program will demonstrate why the use of an innovative implant design together with an appropriate screw-retained provisional and final restoration can help maximize bone and soft tissue volume.

A dual or co-axis implant design allows for Subcrestal Angle Correction™ leading to properly placed implants and the use of screw-retained restorations. Predictable anterior esthetic outcomes in post-extraction socket immediate implants in the anterior maxilla are achievable and should be considered by all implant specialists.

### Program Objectives

- Identify the right patient candidates for post-extraction socket immediate placement in the anterior zone.
- Incorporate tissue management guidelines for preserving the natural gingival contours post treatment.
- Understand the predictable anterior aesthetics benefits of the Co-Axis Implant combined with a screw-retained restoration.

### Director

**Dr. Francesco Amato** - Dr. Francesco Amato completed his MD degree at the University of Catania, Italy, in 1991 along with a one year time Advanced Program for International Dentists in Periodontics at New York University College of Dentistry. 1992-1993 and the Advanced Program for International Dentists in Implant Dentistry at New York University College of Dentistry. Dr. Amato has received his Ph.D. Biopharmaceutical Microbiology at the University of Catania, Italy, 1994-1997. He published numerous articles in international journals, is a lecturer in National and International Conferences. He maintains a Private Practice specialized in Periodontics and Implant Dentistry in Catania, Italy, and is a Clinical Professor in the Master of Periodontology at Universitat Internacional de Catalunya, Spain, and a Visiting Professor in the Department of Periodontology at Columbia University, New York.
