ZenGro™ Xenograft Bone Mineral
Supporting Bone Growth

ZenGro is a porous bone mineral consisting predominantly of calcium phosphate with a carbonate apatite structure that acts as a scaffold to aid in bone regeneration.

**ZenGro features:**
- Highly porous scaffold that provides space for new bone deposition and vascularization
- Rough surface facilitates cell adhesion and spread for bone in-growth
- High volume fill per unit weight
- Carbonate apatite crystalline structure for better oseoconductivity than hydroxyapatite

**ZenGro can be used for:**
- Filling of extraction sockets to enhance preservation of the alveolar ridge
- Augmentation or reconstructive treatment of the alveolar ridge
- Filling of periodontal defects in conjunction with products intended for Guided Tissue Regeneration (GTR) and Guided Bone Regeneration (GBR)
- Elevation of the maxillary sinus floor

ZenGuard™ Resorbable Collagen Membrane Supporting Wound Healing

ZenGuard Resorbable Membrane is a conformable collagen membrane derived from purified porcine peritoneum to aid in wound healing.

ZenGuard can be used for:
- Augmentation around implants placed in immediate extraction sockets
- Alveolar ridge reconstruction for prosthetic treatment
- Guided bone regeneration in dehiscence defects and periodontal defects

ZenGuard Resorbable Collagen Membrane features:
- Resorbable in 3-4 months
- Crosslinking process allows for controlled and predictable resorption
- Soft and drapeable, yet high mechanical strength
- Easy to trim dry or hydrated
