Southern Implants is a leading provider of unique and innovative dental implant products with a focus on top-end professional users who want more choices. Southern’s expertise in research, development and manufacturing of dental implants allows us to provide Innovative Treatment Solutions that will reduce treatment times and improve patient outcomes.

Striving for excellence and meeting customer needs, has led to our wide product range characterized by Unique and Innovative products which include:

- Multiple interfaces, to suit customer preference.
- INVERTA® implant, featuring a body-shift design, engineered for primary stability and suitable for immediate loading.
- Co-Axis®, sub-crestal angle correcting implant, available in angulations of 12, 24 & 36° and various internal and external connections.
- MAX implant, specifically designed for immediate molar tooth replacement.
- The ZYGAN and ZYGEX Implants for severely resorbed maxilla and craniofacial reconstruction.

Our product portfolio is in synchronized evolution with protocol improvements and technological advances.

My sincere thanks to all specialists, dentists and technicians who put their trust in our company.

PLATFORM MATCHED PROSTHETICS

for Ø5mm & Ø6mm implants
In applications of the PROVATA® Ø5mm and PROMAX Ø6mm implants, for single posterior teeth, where the patient is known to have a very strong bite force, the clinician may choose to follow this “Platform Matched” approach. This approach uses the maximum implant platform dimension, in order to give the single tooth prosthetics greater stability.

**Warning:** These Platform Matched Prosthetics are not compatible with PROVATA Ø4mm implants or PROVATA Co-Axis® implants.

Refer to page 6 for PROVATA Ø5.0mm & page 14 for PROMAX Ø6.0mm implant details.

Drill / Implant length measure

NOTE: Longer shaft length available for Ø7mm, Ø8mm and Ø9mm drills
NOTE:
- The surgical kit has an intuitive layout to guide the surgeon through the drill sequence.
- Most Instruments available in various lengths.
- Profile Gauges available for Ø7.0mm, Ø6.0mm & Ø9.0mm implants only.
- All instruments and tooling used during the procedure must be maintained in good condition, and cleaned and sterilized prior to use. Please consult the Southern Implants Cleaning and Sterilization Procedure Guidelines (CAT-1039) for guidance concerning the maintenance of drills, instruments, and surgical trays.
I-PROS-EG  Prosthetic Instrument Tray

NOTE:
- This instrument tray is to be customised by the user to be suitable for use with the preferred implant system and its surgical or prosthetic items.
- Most Instruments available in various lengths.
Implant Placement Procedure for PROVATA® & PROMAX

1. The tools I-HM-S / M / L (standard interface) and I-HZ-M / L (wide interface) are used to pick up the implant from the packaging.

2. The hexagon of the insertion tool in the implant must be fully engaged before torque is applied, to prevent any damage. [The hexagon is fully engaged when the straight portion of the hexagon tool is almost completely sunken in the implant (fig. 1)].

3. The implant is placed in the prepared site and screwed in with a motor unit at 15rpm while applying downwards pressure.

CO-AXIS® FIXTURE MOUNT REMOVAL PROTOCOL

1. The tool I-HM-S / M / L is used to pick up the implant from the packaging (fig. 1) after attaching it to the fixture mount.

2. Once the implant is placed and the position verified, after final X-rays have been taken, remove the fixture mount by unscrewing the fixture mount screw using a I-HD-22U-S / M / L handheld driver (fig. 2).

MSc IMPLANTS DESCRIPTION

MSc stands for Machined Surface coronally.

Capturing the advantage of Southern’s proven rough surface where it is needed most. The “smoother” coronal machined surface is engineered to reduce bacterial adhesion and thus, decrease the risk of infection which could lead to marginal bone loss.

Indicated for patients with higher risk of coronal bone loss (smokers, history of periodontitis, cardio-vascular disease)

The coronal machined surface area covers the top crestal 3mm of the implant.

</tbody>
</table>

**NOTE:**
- Due to design revisions screw tips may be flat or rounded.
- Always ensure that the correct screw is used for the relevant implant and component.
- Blackened and for laboratory use only.

### Screw Head Connections

- **Hex**
- **Quad**
- **Unigrip**
The following symbols are used on packaging labels and they indicate the following:

1. **Manufacturer**
2. **Colour code indicating implant interface**
3. **Implant image**
4. **Implant details and size**
5. **Sterilization using Irradiation**
   - Do not Resterilize
   - Consult instruction for use
   - Do not reuse
6. **CE mark and notified body number**
7. **Expiry date**
8. **Sterile unless package is opened or damaged**
9. **2D Bar coding**
   - Contains the GTIN, Expiry Date and LOT Number
10. **Patient sticker for documentation purposes**
    - (to be used by health care provider on patient file)
11. **Prescription device**

CAUTION: FEDERAL LAW restricts the device to sale by or on the order of a licensed health care provider.

**Platform Interface**

- **Ø4.0**
- **Ø5.0**
- **Ø6.0**
- **Ø7.0 / Ø8.0 / Ø9.0**
