INTERNAL HEX Implants
Product Catalogue
Southern Implants is a leading provider of unique and innovative dental implant products with a focus on top-end professional users who want more choices. Southern’s expertise in research, development and manufacturing of dental implants allows us to provide Innovative Treatment Solutions that will reduce treatment times and improve patient outcomes.

Striving for excellence and meeting customer needs, has led to our wide product range characterized by Unique and Innovative products which include:

- Multiple interfaces, to suit customer preference.
- INVERTA™ implant, featuring a body-shift design, engineered for primary stability and suitable for immediate loading.
- Co-Axis®, sub-crestal angle correcting implant, available in angulations of 12, 24 & 36° and various internal and external connections.
- MAX implant, specifically designed for immediate molar tooth replacement.
- The ZYGAN and ZYGEX implants for severely resorbed maxilla and craniofacial reconstruction.

Our product portfolio is in synchronized evolution with protocol improvements and technological advances.

My sincere thanks to all specialists, dentists and technicians who put their trust in our company.

Graham Blackbeard
Managing Director, Southern Implants

PLATFORM MATCHED PROSTHETICS

for Ø5mm implants
In applications of the Internal Hex Ø5mm implants, for single posterior teeth, where the patient is known to have a very strong bite force, the clinician may choose to follow this “Platform Matched” approach. This approach uses the implant platform, in order to give the single tooth prosthetics greater stability.

**Warning:** These Platform Matched Prosthetics are not compatible with Internal Hex Ø3.7mm/ Ø4.2mm implants or Internal Hex Co-Axis™ Ø4.2mm implants.

---

**Compatible with:**

NOTE:
● Laser markings at 3mm, 5mm, 6mm and 9mm from implant platform.
● Refer to CAT-1201 for Insertion Tool markings and depths.
CAUTION: When drilling close to crucial anatomical landmarks, consider that the drill preparation site may be up to 1mm deeper than the corresponding implant length.

**Twist Drill Markings**

**INSERTION TOOL PROTOCOL**

**Implant Placement Procedure for Straight Internal Hex implants**

1. The tool I-HM-S / M / L is used to pick up the implant from the packaging.

2. The hexagon of the insertion tool in the implant must be fully engaged before torque is applied, to prevent any damage. (The hexagon is fully engaged when the straight portion of the hexagon tool is almost completely sunken in the implant (fig. 1)).

3. The implant is placed in the prepared site and screwed in with a motor unit at 15rpm while applying downwards pressure.

**CO-AXIS™ FIXTURE MOUNT REMOVAL PROTOCOL**

1. The tool I-HM-S / M / L is used to pick up the implant from the packaging (fig 1) using the fixture mount.

2. Once the implant is placed, the position verified, and after final X-rays have been taken, remove the fixture mount by unscrewing the fixture mount screw using a I-HD-22U-S / M / L handheld driver (fig 2).
