

Southern Implants provides the user with two drill options when placing a tapered Tri-Nex Implant. The regular tapered drills (D-L-35/43/50/60) are recommended for medium to hard bone and the slightly slimmer versions (DLS-35/43/50/60) are more suitable for use where the patient presents with soft to medium bone. These drills are available in length 8/10/11.5/13/16mm.

**Drill Comparison:**

The different collar markings stand proud from the tray to ensure easy selection.
