This one-day live surgery course, led by Drs Jadwat and Hoosen, provides clinicians with practical experience in basic implant placement. Delegates will follow the full clinical workflow – from consultation and CBCT planning through digital planning, surgical setup, and live implant placement using the SP1 and SP1 Guide system. The program also includes minor bone grafting, prosthodontic protocols, intraoral scanning and final crown placement. A dedicated lecture session and open Q&A ensure participants gain both surgical and restorative insights to apply in daily practice.
